PERSONAL PROFILE

A motivated and determined Business Computing graduate with a strong interest in the intersection of business and technology. Skilled in IT systems, problem solving and technical support, with knowledge of Java programming principles and system design. Experience working as part of a team environment, including supporting over 100 users in an IT Administration role and contributing to software development during an industry internship. Proactive and engaged in the technology community through volunteering with CoderDojo for over two years. Now seeking an opportunity to apply my technical and business knowledge while continuing to develop within areas such as IT systems, consultancy, cybersecurity or project based roles.

EDUCATION AND QUALIFICATIONS

2022-2024 **Bachelor of Science (Honours) in Business Computing**
Technological University Dublin Aungier St, Dublin 2

Financial Accounting, Intro to Computing & Multimedia, Management, Networks, Object Oriented Software Development, Programming, Object Oriented Programming, Relational Databases, Problem Solving, and Software Design, Quantitative Methods, Statistics, Algorithms & Data Structures, Finance, Management Accounting, Supply Chain Management, Supply Chain Methods, Statistics

2019-2021 **Computer Science, QQI Level 6**
Coláiste Dhúlaigh College of Further Education, Coolock, Dublin

Project Management, Software Architecture, Web Authoring, Work Experience, Graphical User Interface, Programming, Object-Oriented, Programming Relational Databases, Communications

2015-2019 **Leaving Certificate**, Trinity Comprehensive, Ballymun Rd, Santry, Dublin 9

WORK EXPERIENCE

February - August 2024 **Software Development Engineer Intern, Workday**, Church St, Dublin 9

- Collaborated as part of team of using 6, using Scrum methodology, to develop an innovative, complex, payroll system.
- Carried out testing and debugging to ensure accuracy.
- Gained exposure to broader business functions including project management.

2019 – 2021 **IT Administrator, Trinity Comprehensive**, Ballymun Rd, Santry, Dublin 9

- Supporting a team of 100 users to ensure efficient working systems.
- Installing new software on user computers. Connecting computers to an internal network.
- Creating new user accounts and providing access control. Checking and maintaining hardware.
- Performing diagnostic tests and debugging procedures. Implementation security protocols.
- Monitoring and maintaining network & servers. Installing patches and cables.

VOLUNTEERING

September 2023 -Present **CodorDojo**, Ballymun Resource Centre

- Lead mentor teaching coding skills to children and young people ranging from 6 to 16 years old.

- Demonstrating a proactive approach to mentorship and teaching – was instrumental in ensuring that the service could sustain despite challenges by assisting in the recruitment of further volunteers.
- Design and delivery of activities – enhancing planning, co-ordination and presentation skills.
- Supporting local community where there is need for IT skill development.

PROJECTS

Final Year Project: Objective- To create a navigation aid mobile application/ app to support those with a disability

- To enable users to assess and share opinions on the accessibility of specific locations for individuals with a particular disability.

Approach:

- **Detection:** User enters the location name or selects it on a map.
- **Rate Accessibility** Use a color-coded system e.g. Green = Fully accessible, Orange = Partially accessible / works for some disabilities, Red = Not accessible at all.
- **Optional Review:** User can leave a detailed review about the location's accessibility.

Outcome

- Future users can search the location and view previous accessibility ratings and reviews, creating a shared resource for informed decision-making.

Software Used: MS Access, SQL Java, eclipse and NetBeans

Project 2: Objective- To create a mobile application/ app to encourage children to refrain from being too close to a screen

Approach:

- **Detection:** Uses heat and motion sensors to ascertain if a face is too close.
- **Reaction:** If app determines that a face is too close, it asks the child an age-appropriate question.
- **Parental control:** parents can control the complexity of the questions. Child begins to understand that if they hold device too close, they will be interrupted by a question.

Outcome

- If the question is answered correctly then the device will continue operate as normal.

Software Used: MS Access, SQL Java, eclipse and NetBeans

Project 3: Created a functioning database for a Dance School to effectively manage day to day operations including class scheduling, payment monitoring, categorising students according to age and dance experience level, and managing competition records.

KEY SKILLS

- Web Authoring Skills – HTML,CSS , JavaScript
- Programming- JAVA, Python, C#
- Software Project Lifecycle
- Knowledge of Software Testing & Debugging
- .NET Beans
- Firewalls/Security
- Helpdesk ticketing system

HOBBIES AND INTERESTS

Football, Computer Gaming , Computer Programming , Reading
